

GENERATOR MAINTAINANCE AND REPAIRS

Testing & Scheduled Maintenance

Turbines, panels, electric motors, all can be tested.

To test your equipment a wide range of devices is available such as generator sets, high and low voltage transformers, high and low voltage cables of different lengths, resistive/reactive load banks and distribution panels.

Maintenance Includes:

Oil depending on model of the generator

Diesel filter replace: depending on make/model of the generator

Lub oil Filter replace: depending on make/model of the generator

Alternator filters

Trouble-shooting and allocated repairs

Turbocharge overhauling

Injector overhauling

Injector testing

Radiator cleaning/repairs

Fuel pump – repairs (common rail, electronic injection, VIT)

Adjustment of generator timing

Major overhauling of any type of generator: overhauling of piston, piston liners, cylinder head, crankshaft bearing, pedestal bearing, main bearing

Performance check with a report
